

The Relax Sauna stands Heads & Shoulders above any other FIR Sauna ! Why ?

How does the Relax Sauna compare to other Portable Saunas ?

The Relax Sauna is the only Sauna (including wooden ones) that has a patented semi-conductor chip with a computer program that filters out all near infrared light, and all non-absorbable far infrared light. Listed with the FDA (510(k) # K053376) as a medical device, the Relax Sauna is also documented by the FDA to generate 100% absorbable FIR light from 4-14 microns.

20 of these Patented chips (shown above) are in each of the 2 radiators that come with the Relax Sauna that sit in the tent facing you. The computer program embedded in the chip allows only 100% FIR Energy between 4-14 microns.

Other portable saunas can generate only about 30-40% FIR Healing light. Without a filter, a carbon impregnated (black) cloth, heated by a metallic grid or hot plate, can't generate more than 30-40% FIR energy.

Other portable electric saunas work, and do good work, but are probably only about 1/4 as effective as the Relax Sauna. We don't believe they have the intensity to heal large diabetic ulcers in 7 weeks, 20 minutes a day, as The Relax Sauna technology has shown itself able to do. We give you not only a PURE Far Infrared Light, but a Very Intense FIR light, since we also use 1500 Watts. (Not 1000, as do most other portable saunas.)

The Relax Sauna reflecting tent further enhances this point, by reverberating this light over and over again by reflecting it off the silver-embedded cloth that surrounds the Relax Sauna tent. You actually absorb FIR Energy from every nook and cranny of the inside of the tent.

The portable sauna that I owned for 1 year before I discovered the Relax Sauna took 18 minutes just to start sweating, and about 50 minutes for a full sweat. The Relax Sauna generally takes only 8 minutes for a person to start sweating, about 15-16 minutes for them to be dripping, and about 20-22 minutes for a complete sweating treatment. We have given \$100 trade-in value to a number of those who had purchased a Relax Sauna from us, for their previously owned portable sauna that they had not been satisfied with. They notice a big difference with the Relax Sauna.

How does the Relax Sauna compare to wooden FIR Saunas ?

The Relax Sauna is "Affordable, Portable, & Convenient." Priced at \$1050 retail (should be \$1495) in the United States, The Relax Sauna gives you a higher level of technology than most of the wood paneled saunas for 1/3 to 1/4 the price. The Relax Sauna has a patented semi-conductor chip that guarantees 100% FIR Light, and is listed with the FDA as a medical device. Not all of the wooden saunas are 100% Far Infrared Light, nor are they necessarily Medical devices.

The Relax Sauna takes about 2-3 minutes to put together. Similarly, it takes only about 2-3 minutes to take apart, and put it in its own carrying bag. The deluxe chair comes with it, and weighs about 9 lbs, while the radiator & cover fit in the carrying bag and weigh 17 lbs. You can take it on a trip, whether by car or plane, use it on a patio or even outside. It is convenient, and works very effectively. Most wooden saunas require about a 20 minute warm up period. You can be in and out of the Relax Sauna in 20-25 minutes, while someone with a wooden sauna is still waiting for their sauna to be ready. In the Relax Sauna, you have your head outside of the Sauna tent. This allows you to watch a movie, read a book. Many report that this allows extra flexibility and comfort, and allows easier breathing as well.

The Relax Lie Down Sauna is an alternative Sauna for Massage Therapists, designed to fit on a massage Table.

This 1000 watt Lie Down Sauna contains the same technology as the Relax Sauna, & also utilizes the reflecting surface of the tent to shine 100% pure Far Infrared light.
